Soil Health Analysis and Management of Plant Nutrition: 08-03-2021

One day training Programme on “**Soil Health Analysis and Management of Plant Nutrition**” was conducted in collaboration with Global Association for Scientific Young Mind (GASYM) on 08/03/2021. This programme aimed to train the students on Soil Health Analysis and Management of Plants Nutrition to improve economic stability in farmers and maintain good health of agriculture ecosystem. The training programme provided an overview of the importance of soil health analysis and how it can help in improving crop yield and quality. Participants were introduced to the various methods and techniques used for soil health analysis, including soil testing and nutrient management. The training programme emphasized the importance of economic stability in farming communities. Students were taught how proper soil health analysis and plant nutrition management can help improve economic stability in farmers and contribute to the overall health of the agriculture ecosystem. The training programme focused on educating students on the proper management of plant nutrition. This included topics such as soil fertility, nutrient management, and crop rotation. Attendees were taught how to maintain a balance of essential nutrients in the soil, which is crucial for plant growth and development.
